Looking for new ways to engage your students in STEM learning? Want a fresh model for real-world instruction and field experiences?

This summer, join UT transportation experts and curriculum designers for a professional development academy. Collaborate with other teachers to develop transportation themed units that will support Common Core ELA and Math skills and standards.

Up to 20 teachers will be selected for the academy.

To apply, REGISTER BY JUNE 17. There is no charge, but space is limited. Selected applicants will be notified by June 24th.

Complete the workshop for a $250 stipend!

Want to go further and earn an additional $400?

About nine academy participants will be invited to develop innovative, transportation themed lesson plans that will be published and distributed throughout Tennessee. See website for details.

What did last year’s participants say?

Field trips gave me open minded, hands on experiences and ideas.

My favorite activity was talking to the forensic engineer about the car crash. This is when I began seeing the applications of mathematics in transportation.

I enjoyed learning about accident reconstruction. It was interesting and I saw how I could use some of the concepts in my classroom.
